

INITIAL PRIORITY OF THE TEAM = ALWAYS ASSESS FOR POTENTIAL SUDDEN CARDIAC ARREST

RED

Chest — player's RIGHT

Assess signs of life. If none: compressions at once (30:2 until the LMA is in) and call for AED. Rotate after 2 min.

ORANGE

Head — C-spine / airway

Open airway. Insert i-gel / LMA. Bag EVERY 10 compressions. LMA on: leave BVM + O2 on for shocks. Control the log-roll.

GREEN

Head — bag + AED

Bring FIFA bag & AED. Apply AED. Check all clear before shock. Defibrillation is your priority.

BLUE

Right hip — oxygen

Bring oxygen. Apply at 15 L/min. Take the PELVIS in the log-roll. Take over compressions from Red at 2 min.

WHITE

Right leg — spinal board ± basket

Spinal board ± basket below the feet, in line, 2–3 lengths away (trauma: split scoop + basket). LEGS in the log-roll.

BLACK

Left flank — Match Doctor / Leader

Match Doctor / Leader. LEFT flank, hands-off. Ensure ambulance is called. First lift after the 3rd shock (earlier if ROSC).

YELLOW × 4

Feet — second response

At the FEET beside the spinal board, facing the player. Move only on Black's command.

FIFA PEAP 2025 · On-Field Sudden Cardiac Arrest

SET-PIECE RULES

RECOGNISE

Non-contact collapse = SCA. Do not wait for the ball to go out of play. Agonal gasps and slow seizure-like movement are SCA, not a fit.

RED

Commence chest compressions at once. 5–6 cm, 100–120/min, full recoil. Do not stop while Green applies the AED.

ORANGE

Airway after compressions + AED are running. i-gel LMA: bag once every 10 compressions. Face-mask only / leaking: 30:2. LMA on (closed circuit): leave BVM + O2 on for shocks.

GREEN

AED on as soon as it arrives — do not wait for the current 30-count. Pads: upper-right chest + lower-left axilla. Green checks all clear. Face mask only: BVM off for the shock.

BLUE

Oxygen to the reservoir at 15 L/min. LMA connected (closed circuit): leave the oxygen on for shocks — no need to turn O2 off.

WHITE

Spinal board ± basket below the feet, in line with the player, 2–3 lengths away (trauma: split scoop + basket). Involve First Aiders. Legs in the log-roll. Player + board + AED = one unit.

BLACK

Hands-off. Closed-loop commands. Ensure ambulance is called. First lift only after the 3rd shock — earlier if ROSC. Prefer the ambulance onto the field.

DASH

First carry after the 3rd shock (earlier if ROSC). No pulse check after a shock: 1st shock → board, then CPR; later shocks → CPR at once. Carry ≤10 s, board down, CPR ≥2 min; repeat.

Workshop note

This chart follows FIFA PEAP colour coding and the FIFA Emergency Care Manual. HKL drill uses these exact positions. Teaching aid only — not a substitute for current ALS certification.
