

HKL'S SPORTS-EMERGENCY FOOTBALL MEDICINE WORKSHOP 2026

Station 1: FIFA Pre-Match Emergency Action Plan (PEAP) Participant Quick Notes

THE MEDICAL SET PIECE

A pitchside emergency should be rehearsed before kickoff: clear plan, clear roles, correct positioning, ready equipment and closed-loop communication.

M - MEETING Who is involved?	C - CONTACTS Who do we call and where do we go?	R - ROLES & POSITIONING Who does what and where?	E - EQUIPMENT Is everything ready?
Home team doctor Visiting team doctor Stadium medical officer Pitchside paramedics	Emergency numbers Access/egress gates Ambulance location Receiving hospital	Assign Match Doctor + M1-M5 Assign 2nd response (Yellow) Confirm positions Brief/rehearse	Emergency care bag AED + pads Oxygen + BVM Scoop / spinal board / basket + straps
T - TRAINING Have we rehearsed? Rehearse the critical scenarios before the event (SCA, cervical spine, trauma); every colour practises its role.			

Memory cue: M-CRET = Meet - Call - Position - Check - Train

2. GOLDEN RULE: NON-CONTACT COLLAPSE

Any player who collapses without contact: **PRESUME SUDDEN CARDIAC ARREST (SCA) until proven otherwise.**

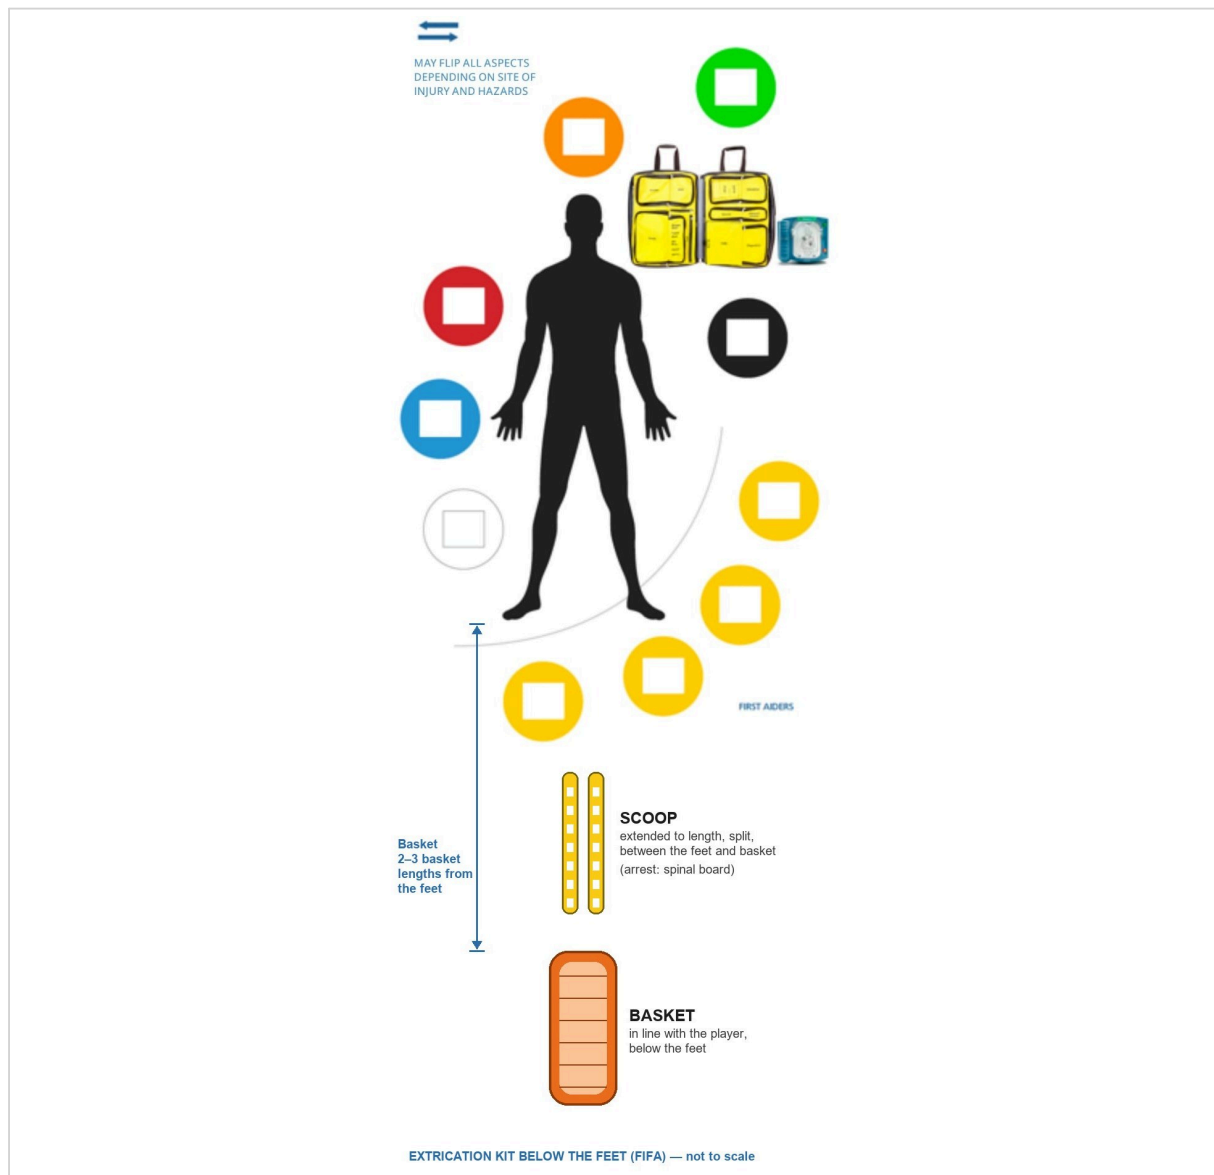

ENTER IMMEDIATELY -> ASSESS -> START CPR -> APPLY AED WITHIN 30 SECONDS
Do not delay CPR/defibrillation for C-spine or fracture assessment in a non-contact collapse.

Role	Position	Main responsibility
Match Doctor (Black)	2-3 m away; full view	Hands off. Overall command, CPR/AED flow, calls the lift, ambulance/referee liaison.
M1 Head (Orange)	At head	MILS, airway alignment; commands the log-roll / tilt count.
M2 Chest (Red)	Right chest	ABCDE, continuous CPR 100-120/min, full recoil.
M3 Oxygen (Blue)	Right hip	O2 15 L/min to BVM; takes over compressions at 2 min; takes PELVIS in log-roll.
M4 Legs/Extrication (White)	Right leg	Trauma: scoop + basket; arrest: spinal board ± basket; splints; takes LEGS in log-roll.
M5 Equipment (Green)	Left head/shoulder	AED, emergency bag, equipment to M2; loud CLEAR before shock.

Match Doctor = Black (FoP team leader). First-response FoP medical team = Red + Blue + White + Green + Orange (M1–M5).
Second-response FoP medical team = Yellow (First Aiders).

4. PITCHSIDE POSITIONING & TEAM ERGONOMICS

Use this layout during the practical station to visualise where the FoP medical team, first aiders and equipment should be positioned.

BLACK Match Doctor	ORANGE M1 - Head	RED M2 - Chest	BLUE M3 - Oxygen	WHITE M4 - Legs	GREEN M5 - Equipment
------------------------------	----------------------------	--------------------------	----------------------------	---------------------------	--------------------------------

POSITIONING PEARLS

Equipment zone: AED + O2 + emergency care bag at the player's head/left side. **Extrication zone:** below the feet, in line with the player – basket 2–3 lengths away, scoop (arrest: spinal board) between; kept back until required. **Match Doctor:** 2–3 m away, full view.

PREPARE -> TILT -> SCOOP -> STRAP -> BASKET -> GO

M1 commands a gentle **15-20 degree tilt**. Reconnect the scoop **head first, then feet**. Strap: **Chest -> Pelvis -> Legs -> Head**.

Note: scoop + basket (above) is for trauma; for an arrest in progress, log-roll onto the spinal board ($\pm$ basket) – see Station 5.

6. CLOSED-LOOP COMMUNICATION

NAME -> COMMAND -> REPEAT -> CONFIRM

Example: Match Doctor: 'M5, apply AED.' M5: 'Applying AED.' M5: 'AED attached.'

BEFORE MATCH M-CRET Meet - Call - Position - Check - Train	NON-CONTACT COLLAPSE SCA -> CPR -> AED AED within 30 sec	LEADERSHIP Hands off - Eyes up Command and confirm	EXTRICATION M1 commands Tilt - Scoop - Strap - Basket
--	---	---	--
